EOLS-PX-GU-20 Series

Compliant with ITU-TG.987.2 XGPON N2a class
Single fiber bi-directional Transceiver
2.48832Gbps upstream and 9.95328Gbps downstream
RoHS6 Compliant

Features

◆ SFP+ Package with SC Receptacle

◆ Single +3.3V Power Supply

◆ 2.48832 Gbps / 1270 nm Burst-Mode Transmitter with DFB laser

◆ 9.95328Gbps / 1577nm High Sensitivity Continuous-Mode APD-TIA Receiver

◆ LVTTL Tx_Burst, Tx_SD, LOS

◆ LVTTL Sleep Mode for Power Consumption

◆ Operating Case Temperature

   Standard: 0℃~+70℃

   Industrial: -40℃~+85℃

◆ Compliant with Class 1 FDA and IEC60825-1 laser safety

◆ Compliant with SFF-8472 MSA

◆ Compliant with SFF-8432 MSA

Applications

◆ XGPON N2 Class

Functional Diagram

Product Description

EOLS-PX-GU-20 Series is a transceiver for the optical network unit (ONU) of 10GPON with 9.95328Gbps in downstream and 2.48832Gbps in upstream. EOLS-PX-GU-20 series is high performance module for single fiber communications by using 1270nm burst-mode transmitter and 1577nm continuous-mode receiver.

The transmitter section uses a DFB 1270nm laser and is a class 1 laser compliant according to International Safety Standard IEC-60825-1. The receiver section uses an integrated 1577 nm detector preamplifier (IDP) mounted in an optical header and a limiting post-amplifier IC.

CML interface is used for differential inputs and outputs. A LVTTL logic and control interface simplifies interface to external circuitry.

Absolute Maximum Ratings*[Note2]

Parameter	Symbol	Min.	Max.	Unit
Storage Temperature	T_S	-40	+85	°C
Supply Voltage	V_{CC}	-0.5	4.0	V
Operating Relative Humidity	Hopr	5	95	%

Note2: Exceeding any one of these values may destroy the device permanently.

Recommended Operating Conditions

Parameter	Symbol		Min.	Typical	Max.	Unit
Operating Case Temperature	T_c	EOLS-PX-GU-20-1	0		+70	°C
		EOLS-PX-GU-20-I1	-40		+85	
Power Supply Voltage	V_{CC}		3.15	3.3	3.45	V
Power Supply Current	I_{CC}				450	mA
Surge Current	I_{Surge}				+30	mA
Data Rate	@ Tx side			2.48832		Gbps
	@ Rx side			9.95328		

Performance Specifications - Electrical

Parameter	Symbol	Min.	Typ.	Max	Unit	Notes
Transmitter						
CML Inputs(Differential)	Vin	100		1000	mVpp	AC coupled inputs

16	VccT	Transmitter Power	2	3.3 ± 5%, Note 17
17	VeeT	Transmitter Ground	1	Note 15
18	TD+	Transmit Data In	3	Note 18
19	TD-	Inv. Transmit Data In	3	Note 18
20	VeeT	Transmitter Ground	1	Note 15

Notes:

Note9: TX Fault is an open collector/drain output, which should be pulled up with a 4.7K – 10KΩ resistor on the host board. Pull up voltage between 2.0V and VccT, R+0.3V. When high, output indicates a laser fault of some kind. Low indicates normal operation. In the low state, the output will be pulled to < 0.8V.

Note10: TX_Burst_Enable is an input that is used to open the transmitter burst optical output. It is pulled up within the module with a 4.7 – 10 KΩ resistor. Its states are:

Low (0 – 0.8V): Default Transmitter burst on

(>0.8, < 2.0V): Undefined

High (2.0 – 3.465V): Default Transmitter burst off

Note11: SDA/SCL is the 2 wire serial interface, which should be pulled up with a 4.7K – 10KΩ resistor on the host board. MOD_ABS is GND internal, which should be pulled up with a 4.7K – 10KΩ resistor on the host board, high indicates module is absence.

Note12: TX_SD is the indicator of TX signal. High indicates laser on, low indicates laser off.

Note13: LOS (Loss of Signal) is an open collector/drain output, which should be pulled up with a 4.7K – 10KΩ resistor. Assert high when the input optical power below the threshold.

Note14: linternal pulled up with a 4.7K – 10KΩ resistor internal. P_Down is a controller PIN for saving power consumption. If not use this feature, main board connection should be NC.

Low (0 – 0.8V): TX power saving is on and transmitter will be set to sleep mode.

(>0.8, < 2.0V): Undefined

High (2.0 – 3.465V) or NC: TX power saving offf

Note15: VeeR and VeeT may be internally connected within the SFP+ module.

Note16: RD-/+: These are the differential receiver outputs. They are AC coupled internal.

Note17: VccR and VccT are the receiver and transmitter power supplies. They are defined as 3.3V ±5% at the SFP+ connector pin. Maximum supply current is 600Ma. Recommended host board power supply filtering is shown below. Inductors with DC resistance of less than 1 ohm should be used in order to maintain the required voltage at the SFP+ input pin with 3.3V supply voltage. When the recommended supply-filtering network is used, hot plugging of the SFP+ transceiver module will result in an inrush current of no more than 30Ma greater than the steady state value. VccR and VccT may be internally connected within the SFP+ transceiver module.

Note18: TD-/+: These are the differential transmitter inputs. They are AC-coupled inside the module.

TX_SD Timing Sequence
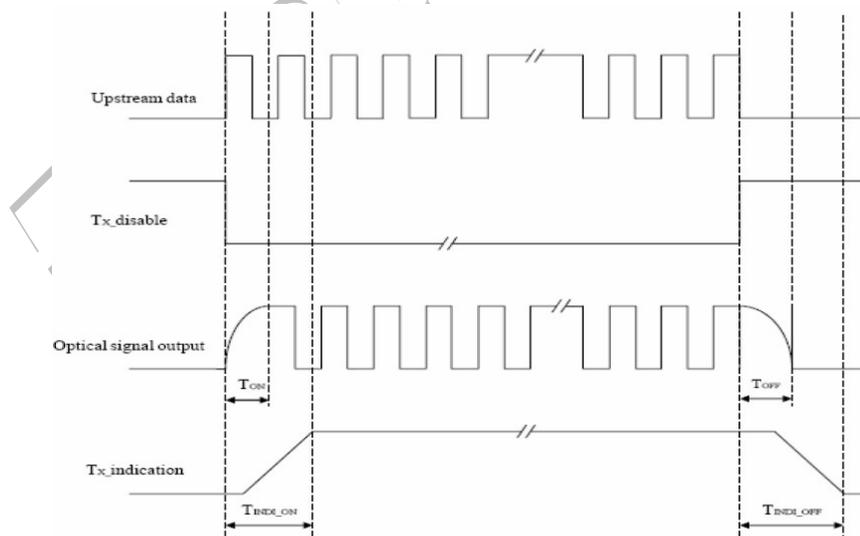

Parameter	Symbol	Min	Typ	Max	Unit
Tx_indication assert	Tindi-on			200	ns
Tx_indication deassert	Tindi-off			200	ns
Tx_burst on	Ton			12.8	ns
Tx_burst off	Toff			12.8	ns

EEPROM

The serial interface uses the 2-wire serial CMOS EEPROM protocol defined for the ATMEL AT24C02/04 family of components. When the serial protocol is activated, the host generates the serial clock signal (SCL). The positive edge clocks data into those segments of the EEPROM that are not writing protected within the SFP+ transceiver. The negative edge clocks data from the SFP+ transceiver. The serial data signal (SDA) is bi-directional for serial data transfer. The host uses SDA in conjunction with SCL to mark the start and end of serial protocol activation. The memories are organized as a series of 8-bit data words that can be addressed individually or sequentially.

The Module provides diagnostic information about the present operating conditions. The transceiver generates this diagnostic data by digitization of internal analog signals. Calibration and alarm/warning threshold data is written during device manufacture. Received power monitoring, transmitted power monitoring, bias current monitoring, supply voltage monitoring and temperature monitoring all are implemented. If the module is defined as external calibrated, the diagnostic data are raw A/D values and must be converted to real world units using calibration constants stored in EEPROM locations 56 – 95 at wire serial bus address A2h. The digital diagnostic memory map specific data field define as following .For detail EEPROM information, please refer to the related document of SFF 8472 Rev 10.2.

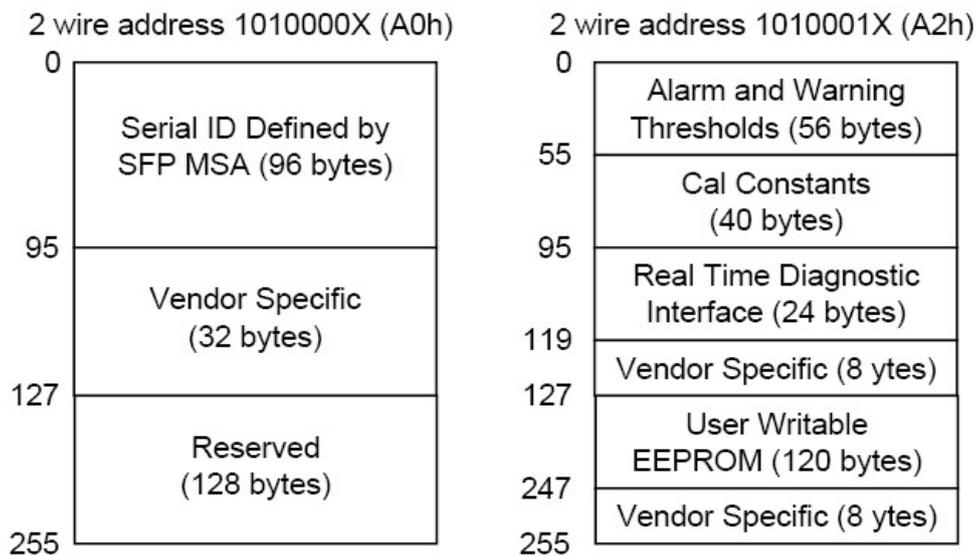

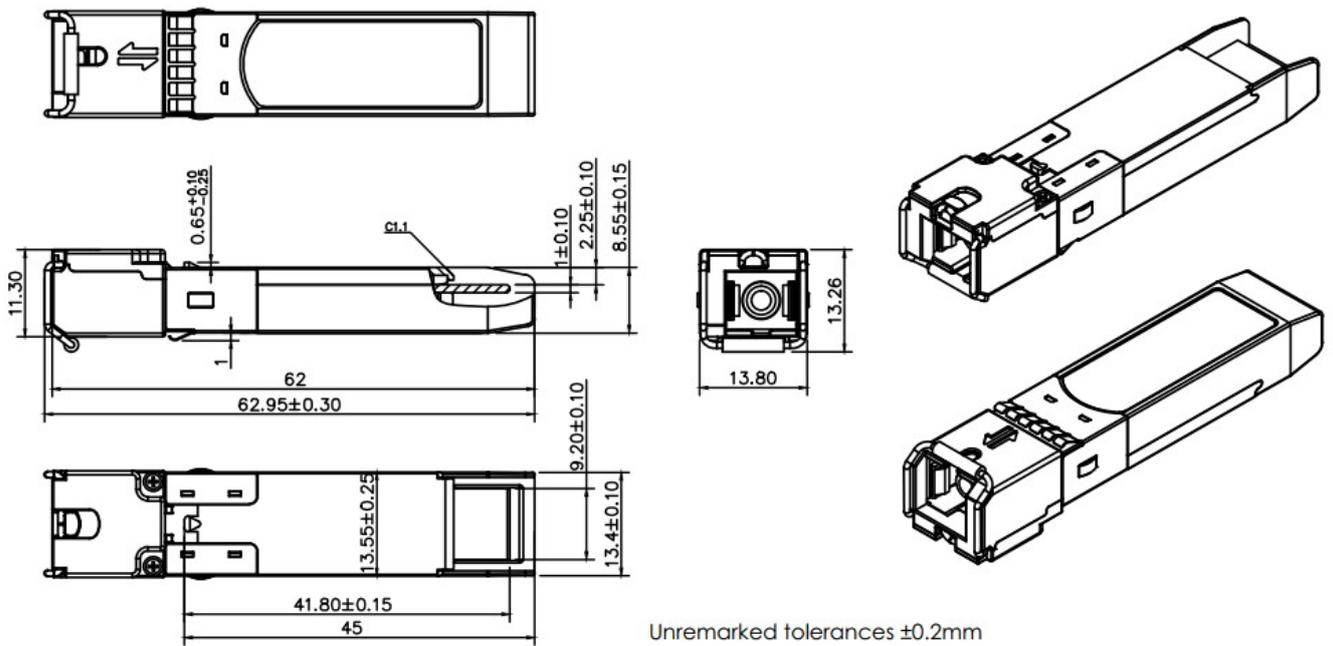

Digital Diagnostic Monitor Specification

Address	Parameter	Range	NOTES
96-97	Temperature	-40 to 125°C	Case temperature
98-99	Vcc Voltage	0V to 6.55V	
100-101	Bias Current	0 to 131Ma	Unit 2uA
102-103	TX Power	-40 to 8.2 dBm	Unit 0.1uW
104-105	RX Power	-40 to 8.2 dBm	Unit 0.1uW

Eye Safety

This single-mode transceiver is a Class 1 laser product. It complies with IEC-60825 and FDA 21 CFR 1040.10 and 1040.11. The transceiver must be operated within the specified temperature and voltage limits. The optical ports of the module shall be terminated with an optical connector or with a dust plug.
